REPORT

BY

THE ORDINARY MANAGERS

OF THE

ROYAL EDINBURGH ASYLUM FOR THE INSANE.

Presented to the Annual General Meeting of the Corporation, held on Monday, 22d February 1875.

The Ordinary Managers of the Asylum have now, in terms of their statute, to give an account of their proceedings for the year ending 31st December 1874.

The Managers have much pleasure in reporting, that the past year has been a prosperous one in the history of the Institution, both as regards the condition of the Patients and the state of the finances. In the Annual Report for the year 1873 it was stated, that owing to the advance which had taken place in the cost of provisions and fuel, and the rise of wages, the expenditure had during that year somewhat exceeded the income; and it was found necessary, in order to meet the deficiency, to raise the rate of board for the Metropolitan Paupers from L.25 to L.27, that of other Pauper Patients from L.28 to L.32, and that of Private Patients in the other parts of the Asylum in a proportionate degree. increased rates came into operation on 31st March last, and the Managers are glad to be able to state, that the necessity for the advance has been recognised by those upon whom the burden has fallen; for although the number of Patients in the Asylum is less than it was in the previous year, the cause of the diminution cannot be traced to the additional cost of maintenance, but is mainly attributable to the number of country Patients transferred from Morningside Asylum to the Midlothian District Asylum, upon the opening of that institution in November 1874.

The daily average number of Patients accommodated in the East House during the year 1874 was 74—the number for the year 1873 having been 66, shewing an increase of 8 Patients.

The daily average number of Patients in the West House during the year 1874 was 665 against 683 of the previous year, shewing a decrease of 18, and being entirely confined to the female side of the house, which was previously overcrowded.

And the Surplus Revenue to L.2,892 12 10

There is not included in the above expenditure the statutory instalment towards the liquidation of the debt. The Statutory Debt amounted at Martinmas 1874 to......L.16,288 9 0

The estimated amount under the operation of the

Sinking Fund established by the act is 15,132 5 6

Leaving due by the Corporation...... L.1,156 3 6 Which must be paid out of the Surplus Revenue for the year, reducing the available surplus to L.1736 9s. 4d.

In the Report presented at the last general meeting, allusion is made to the structural alterations on the Asylum buildings which were then in contemplation, with the view of modernising the house, so as to admit of the treatment of the insane therein on the most improved principles of the day. The consideration of this important subject having been referred to the Building Committee, they on 18th March 1874 presented a Report, drawn up after consultation with Mr W. L. Moffatt, their architect, and which was printed and circulated among the Ordinary Managers. The main features of the recommendation contained in this Report were—

The substitution of Bay Windows for the Open Galleries in the Male division of the West House, and removing the Internal Walls behind these.

The providing of new Bath-rooms.

The providing of new Dining-hall, Kitchen, and Store.

The alterations on Stair-cases, and on the Ground Floor.

Additional Storey to Offices behind West House, to be used

as Workshops.

Alterations on the East House.

Plate-glass Windows for East House.

Lowering the Airing-court Walls.

Altering the Entrance to West House to the north side.

The plans having been generally approved of by the Managers, estimates were taken, and the works are now in progress. When finished, the Managers believe that the West House will be second to no institution of the kind in regard to the structural arrangements for securing the proper treatment of mental disease, and the comfort and happiness of the Patients. It may be stated, that one very important feature of the new arrangements will be a common dining-hall for the Pauper Patients of the dimensions of 90 feet in length by 42 in breadth, and also a handsome dining-room for the intermediate class of Patients.

With reference to the alterations on the West House, the following remarks occur in the report by Sir James Coxe, Commissioner in Lunacy, dated 4th October 1874:-" The establishment is, in fact, in a period of transition, and many of the grave defects which have on former occasions been criticised or condemned, are now admittedly only awaiting the progress of the work of reconstruction and remodelling for their removal. With the completion of the new buildings which have now been begun, and of the structural alterations which will be undertaken with the old, extensive improvements will be carried out in the internal furnishings, and every endeavour made to place the establishment in harmony with the advanced views of the day. An intention is likewise expressed, when the dining-halls have been provided, to introduce greater variety in the meals, and to greatly improve the manner of serving them. In the meantime, it is satisfactory to state that various improvements have already been effected in the management of the institution, and that the restriction in the use of restraint and seclusion commented on in last report again attracts attention, and merits approval."

The working plans for the contemplated structural alterations on the East House are not yet fully matured, but the rough sketch prepared by the architect has been submitted and approved of; and it is believed, that when carried out, the improvements will meet with general approval.

The contract price of the alterations on the West House, including engineer work, amounts to L12,017 2s. 6d., in order to meet which large expenditure, the Managers have been obliged to borrow the sum of L.8775. Should the surplus revenue for the current year equal what it has amounted to in the past, as it is fully expected, no further loans will be required for the West House alterations. Provision will, however, require to be made, by means of a further loan, for the cost of the alterations on the East House; and when these are finished, the Managers are of opinion that steps should be taken for the erection of a suitable place of worship for the Patients.

Looking to the heavy extraordinary expenditure which the Managers have been compelled to undertake, they regret that they cannot see their way to recommend any reduction in the rates of board.

In regard to the condition of the Patients, the Managers have to record with thankfulness, that during the past year there has been comparatively little sickness in the house, and that the rate of mortality even during the coldest period has been wonderfully low. They believe that these happy results are in no small degree owing to the admirable manner in which the Physician-Superintendent has discharged his onerous duties, and the unceasing care and attention bestowed by him on the welfare and the wants of the Patients of every class. His Annual Report is herewith submitted, as usual.

The Annual Report of the Charity Committee is also herewith laid before the Corporation, and the Managers take this opportunity of again directing attention to the great benefits conferred by the fund under the administration of this Committee. It will be noticed that the average number of Patients whose boards were during last year to a greater or less degree paid by the Committee, was twenty-seven; and when it is remembered that all these per-

sons have been incapacitated from providing for themselves by one of the most afflictive and inscrutable of the dispensations of the Almighty, and that in some instances it is the bread-winner of a house or the mother of a large family who is laid aside, the Managers hope that the benevolent public will recognise and respond to the claims of the Charity Fund of the institution, for which subscriptions will at all times be thankfully received by the Treasurer.

(Signed) P. MILLER, Chairman.

REPORT

OF THE

CHARITY COMMITTEE OF MANAGERS FOR THE YEAR ENDING 31st DECEMBER 1874.

The Account of the Treasurer's Intromissions with the Chari	ty
Fund during the past year is herewith submitted, shewing a	an
Income ofL.385 5	10
And an Expenditure of	2

Leaving a Palance of...... L.25 8 8

The amount of the Fund at 31st December last was L.9064 10s. 7d.

The total number of Patients who have derived benefit from the Fund during the year was 33, the average number on the roll each quarter being 27, and the average allowance to each Patient L.10 18s. 1d.

(Signed) JOHN PARKER.

PHYSICIAN-SUPERINTENDENT'S ANNUAL REPORT

FOR THE YEAR 1874.

I have the honour to submit the following Report of the Royal Edinburgh Asylum for the Insane for the year 1874.

In the beginning of the year there were 739 patients in the Asylum, and on the 31st December the number was 714.

There were 308 patients admitted during the year, of whom 151 were men, and 157 women. The total number of patients under treatment was therefore 1047.

There were 276 patients discharged during the year, of whom 118 were men, and 158 women.

There were 57 deaths, of whom 27 were men, and 30 women.

The average number of patients resident during the year was 738, viz., 349 men, and 389 women.

Accompanying this Report are Statistical Tables shewing nearly all the facts that can be tabulated as to the forms, causes, and duration of the malady in the cases of the patients who were admitted and discharged, and also the causes of death in those who died.

ADMISSIONS.

The number of admissions (308) has been greater by 14 per cent. (38) than the average for the previous ten years, and this increase has taken place equally in the private and rate-supported class of patients. Only once in the history of the institution has the number of the latter been greater than this year, and only twice have the private patients admitted been so many. The

numbers admitted this year amounted to 42 per cent. of the average population, which is an unusually large proportion for an Asylum.

Of the 220 pauper patients, 214 were sent by parishes having rights of presentation-from Edinburgh, Leith, and Orkney, in fact. We thus received only six of this class of patients from beyond our own district, a number unprecedentedly few, and shewing clearly that now all the parishes of Scotland have Asylum accommodation of their own. How very different this state of matters is from what existed formerly, is shewn by the fact, that ten years ago, in the year 1864, we had sent to this Asylum 57 pauper patients from beyond our district, and in the year 1866 as many as 93. On the other hand, there has been a steady tendency, from year to year, for the patients from our own parishes to increase. Taking the five years beginning with 1864, our average number of admissions from the Edinburgh, Leith, and Orkney parishes was 134 a year, for the five years ending last year it was 176, and now this year it has run suddenly up to 214, a figure higher by 26 than ever occurred before. Such a fact as this is an important one, not only to you, as Managers of this institution, but to the public at large, and to the medical profession; and some explanation of it should be attempted. Is insanity increasing at this enormous ratio? Or are cases sent to us now, labouring under milder forms of the disease, that formerly would have been kept at home? Are the cases generally sent at an earlier period of the malady? Or do any recent legislative enactments affect the numbers of pauper patients sent to us? Such seem the natural questions that rise when this matter is considered.

I confess that, on seeing the large numbers for this year, my first thought was that the increase was due to the 4s. a week promised by the Chancellor of the Exchequer from the imperial revenue towards the support of each pauper lunatic in an Asylum; but I see from the newspapers that this has not been paid to Scotland as yet, the principle of apportioning it having only been settled by the government last week. In England the Union Chargeability Act, by which the lunatics of a parish were made chargeable, not to it alone, but to a number of parishes combined

in a Union, was at once followed by a very great increase in the yearly admissions into the English County Asylums, and many persons pointed to this fact as proof that lunacy was rapidly on the increase, while, of course, it merely shewed how the numbers of the registered insane were increased by an Act of Parliament. It may be that the prospect of receiving help from the national exchequer has tended to increase the numbers sent to us.

In regard to the period of the disease at which the cases are now sent, as compared with former years, I have taken the number of patients who had been insane for one month before being sent to us, and those who had been so for six months, and for a a year, during the last eleven years, and have compared the result of the five years beginning with 1864, the five years beginning with 1869, and this year, with the following result:—

During the first period of five years (1864-68) there were sent to us an average of 105 patients (private and pauper) a year who had been less than a month insane, 59 who had been so between one and six months, and 15 who had been between six and twelve months. In the second period of five years (1869-73), the numbers were 91, 45, and 15; and this year they have been 145 less than a month ill, 50 between one and six months, and 19 between six and twelve months. There was therefore no special tendency between 1864 and 1874 to send the cases here at earlier periods of their disease, but rather the reverse. This year, however, 47 per cent. of all the patients were sent in within a month from the beginning of their disease, instead of 36 per cent., which had been the average for the previous ten years. While the large number of cases sent us this year might therefore have been partly accounted for by the earlier period at which they were sent, yet this does not in any way account for the steady increase of pauper patients from our own district that has taken place for the past ten years, an increase out of all proportion to that of the population.

It is very difficult to tell with certainty whether milder forms of the disease are now sent to us, that formerly would have been kept at home; but, as shewing light on this point, I have taken some of the well-defined varieties of insanity, some of them

usually of a severe type, and others milder, and have compared the numbers of each variety sent here during the five years beginning with 1864, the following five years, and this year respectively. The kinds of insanity I have taken are—1. that dating from birth; 2. that following too prolonged nursing in women; 3. that occurring as the result of old age—all three of which may be taken as representing mild varieties of the disease; and, 4. Epileptic insanity, or that caused by fits; 5. General Paralytic insanity; and, 6. insanity following childbirth in women, which are usually more acute and severe varieties of the malady, which would have been thought likely at any time to require Asylum treatment. The following are the results:—

During the five years 1864—68, there were sent here 175 cases of the three mild kinds of insanity, and 170 cases of the three severe kinds.* During the next period of five years the numbers were 181 and 177† respectively; and this year they were 36, or at the rate of 180 for five years, and 49,‡ or 245 for five years. Thus it is seen, that while in the second period of five years there was a slight increase in both the severe and mild kinds, yet the increase was proportionally greater to a very slight extent in the mild. Taking this year, on the contrary, it is the severe varieties that have increased absolutely and proportionately, while the milder varieties have stood still. There is no explanation to be got from this way of looking at the matter, therefore, except that this seems to have been an exceptional year in producing severe varieties of insanity.

Looking at the different parishes, I find that the Leith parishes have not sent us more patients this year than the average of the last five years, so that the increase has taken place in the numbers from St Cuthbert's and the City. The former, indeed, shews an increase of 50 per cent. in its numbers over last year, and 22 per

^{*} Congenital, 54; Lactation, 33; Senile, 88; Epileptic, 50; General Paralytic, 84; and Puerperal, 36.

[†] Congenital, 62; Lactation, 21; Senile, 98; Epileptic, 54; General Paralytic, 83; and Puerperal, 40.

[†] Congenital, 4; Lactation, 8; Senile, 24; Epileptic, 14; General Paralytic, 26; and Puerperal, 9.

cent. over the average number of the last five years. The City parish sent us an excess this year of 25 per cent. over its numbers for the previous five years. The number of patients sent here in any one year from any one parish is, no doubt, liable to vary much; but still it is a striking fact that such a large increase should have taken place in the numbers of insane patients sent here from the two large parishes that comprise between them the City of Edinburgh.

As shewing how very differently we draw our private patients, I find, that of the 88 admissions, only 35 were from Edinburgh, 36 being from the rest of Scotland, the remaining 17 being from England and elsewhere.

The bodily health and condition of half the patients, on admission (see Table XIV.), was, as usual, poor; but considering that the majority belong to a city population, it cannot be considered an extravagant proportion that there were no more than 20 brought to us in an utterly exhausted state.

In regard to the forms of mental disease (see Table XII.) under which the patients laboured on admission, there is one fact which is very striking, and of great interest. The number whose malady was characterised by depression of mind was most unusually large. I find no fewer than 88 under the head of Melancholia, a number greater by 70 per cent. than the average number classified under that heading during the previous ten years, though, as we have seen, the excess of admissions this year was only 14 per cent. Many of the worst of these cases were more desperately intent on taking away their own lives than any patients I have The ingenuity, determination, and persistence of this suicidal propensity in some of them would scarcely be believed by any one who had not experienced it. Some of them had, in addition, the impulse to destroy those near them; and the treatment and management of this combination of symptoms is, as you may imagine, attended with no small difficulty and danger to all who have to do with them, and occasioned the greatest anxiety to myself. One patient tried to swallow everything he could lay his hands on, from the ink used by his fellow inmates of the ward to write their letters, to any small stone he could pick up. One

day, before we knew his propensities, he swallowed 82 small stones, weighing 24 ounces, and was none the worse for it. He picked out nails out of the wood-work, and tried to push them into his heart, and tried to starve himself so persistently for months, that he had to be fed with the stomach-pump. He required two attendants, one by day, and another by night, to be with him all that time. Another man broke a piece of the tumbler out of which he was drinking, and inflicted a wound, fortunately slight, on his throat in a moment; and afterwards, when closely watched, would attack his attendant, to provoke him, as he said, to kill him, so that he had to have two attendants all the time near him. We have had a number of such cases during the year, any one of which I should formerly have thought bad enough to be the worst case in two or three years.

DISCHARGES.

Considering the large number of our admissions, it has been a fortunate thing for the working of the institution, that we have been able also to discharge a very large number. Had this not been the case, we must have been overcrowded at the end of the The total number of patients discharged was 276, and of these 149 were recovered, and 84 relieved. The per centage of recoveries on the admissions was thus 48, the average rate for the Scotch Asylums for the last ten years having been 38, and for the year 1873, 42 per cent. Of the 294 patients who were discharged recovered from this Asylum during the years 1873 and 1874, there were only 29 who had to be sent back this year on account of a return of their disease. Even of the 69 patients discharged relieved to their own homes, or to be under the care of their friends, in 1873 and 1874,* only 17 had to be sent back this year, the remainder presumably helping to support themselves, or, at all events, being able to live outside an Asylum not chargeable to any public funds.

The public have a natural, but, I think, unfounded fear of persons who have had the misfortune to have been in an Asylum,

^{*} I do not include in this number those transferred to other Asylums relieved.

even when they have recovered from their malady; and this feeling is much stronger in reference to those who have left Asylums not quite recovered. In recent and acute cases, insanity is a disease that unquestionably makes the patient labouring under it dangerous both to himself and others in many cases. But when it has become chronic, the intensity of its symptoms abate very much, and the patients are not ordinarily dangerous. In this, as in all Asylums, are to be found chronic patients working as shoemakers and joiners, &c., having access to the most lethal weapons, who, on admission, were most dangerous men.

The total number of discharges of private patients (56), and the recoveries (43), were in the same proportion to the number of admissions of this class as in the case of the pauper patients: usually a larger proportion of the latter recover. The deaths having also been in the same proportion in the two classes, the general "movement of the population" was the same in both.

DEATHS.

This has been the most healthy year in the history of the institution since 1844; and as the population was then only 300, this may be said to have been the most healthy year under the present conditions of the Asylum. The death rate has only been 7.7 per cent. on the average numbers resident, and 5.4 on the total number of patients under treatment. This is 1 per cent. less than last year, and 2 per cent. below our former average; and is considerably less than the average death rate in all the public Asylums of Scotland for 1873, which was 8.5 on the average numbers resident, and 6.2 on the total number under treatment. This is a result to be most deeply thankful for, considering that our pauper patients are all from a city, are often ill nourished, and their constitutions broken down by dissipation, before coming here.

It is also an important fact, that during the months of November and December, when the death rate of our large cities was doubled from chest affections caused by the cold, the patients in the Asylum were very healthy indeed, and we did not lose a single case from any catarrhal affection. The reason of this was, not that our patients enjoy an immunity from such diseases when

subjected to the conditions that produce them, or that we have not a fair proportion of the old and the weak, who suffer most from these. In both these respects, I think, we are worse off than an equal number of the general population, having more than sixty patients over 60 years of age in the house. But in an institution like ours, the patients are not exposed to the vicissitudes of temperature to any extent, the old and the weak are specially cared for in the way of warmth, clothing, and food, and the beginnings of what might turn out to be fatal illnesses are observed, and medically treated in time. The lesson seems to be, that the enormous mortality in our country during the cold weather was largely preventible, if the conditions of life among our population had been in any degree conformable to the teachings of medical science and common sense.

About 60 per cent. of the deaths were due to diseases of the nervous system, which is very near the average of Asylums of this character. The contrast between this and what prevails in the general population is well shewn by the fact, that in the latter only about 8 per cent. die from nervous diseases. Nothing could more strikingly shew that the mental disorders for which our patients are sent to us are essentially connected with, not only functional disturbance in the working of the brain, but in many cases with such decided organic changes, that they are the direct causes of death, sooner or later.

One cause of death, that used to be too prominent with us, has been, during the past year, much less frequent, I am glad to say. I mean Consumption. Only nine cases of this disease occurred, and of these it was present, on admission, in four. The construction of the Asylum building, which enables us to keep our patients very warm in cold weather, tends to make ventilation during the summer more difficult. No doubt, much may be done by the Medical Officers of such an institution, in stopping the development of consumption in individual cases, by adopting proper means of prevention, where there seems to be any tendency towards it.

Four of the patients who died had been inmates for over twenty-five years, and one within a few months of fifty years. She was

our oldest inhabitant; had outlived nearly all her relatives, and terminated her half century of Asylum life in the most peaceful way. This was the only home she had any recollection of; the only friends she had were some of her old fellow patients, the old attendants, and the officials; and I think no one will deny, that in providing a home and friends for such as she, the institution fulfils a most merciful and humane duty to society. Her mental condition at the last was one almost of deprivation of mind, and her brain was found shrivelled to an extent which I have never seen equalled.

GENERAL HISTORY OF THE INSTITUTION.

It is with much thankfulness that I again report the continued freedom of the patients from any infectious or epidemic disease, and that only one serious accident occurred during the year. That was a case of suicide, the circumstances of which were investigated by the proper authorities, and no blame was thrown on any one. It was the first case that had occurred in my professional experience of fourteen years, and was a source of the deepest regret to me. When our new structural improvements are completed, we shall have special arrangements for the constant watching of such cases by night.

At the end of the year we had 219 private patients, and 495 chargeable to public funds. This is an increase of 10 of the former, and a decrease of 35 of the latter, as compared with our numbers last year. The number of male pauper patients was precisely the same (229) at the end of the two years, the decrease being thus entirely in the women, which was a great advantage to the working of the establishment, the female side of the West House having been previously somewhat overcrowded.

One of the greatest difficulties in the working of the institution has been the procuring of suitable attendants, and retaining their services for any length of time. The importance of having good attendants to the patients, to the institution, and to myself, is simply incalculable. The influence on individual patients of a kindly, cheerful, firm, and trustworthy companion, is very great indeed; while the effect of a smoothly working, orderly, and well

regulated ward, under the charge of two or three such persons, on its twenty or thirty patients, with their different dispositions, their mutual incompatibilities, and their unhinged minds, is, as may be imagined, most beneficial. We really need good heads and kind hearts for such work. One of the greatest improvements that could be introduced into the management of Asylums for the insane, would be a more systematic training for the attendants, and the offer of much better pay, after it is found that they have the natural qualifications and the training requisite to qualify them for doing their responsible duties well. If attendance on the insane were made more of a business, and those who took to it reckoned more as skilled workmen than they are, it would be vastly better for the patients in Asylums. When the buildings and general arrangements of the Asylum are in a more settled state, I shall, with your approval, endeavour to establish some mode of more systematic training for attendants than exists at present.

It would, no doubt, also tend greatly to our keeping a settled class of attendants, were the institution to provide cottages for a certain number of those who are married.

The great and enduring feature in our general history this year has undoubtedly been the completion of the plans for the structural improvements of the West House, and the energetic pushing on of this work during the last five months of the year. will ever render the year a marked one in the annals of the insti-The great defects in the older portions of our buildings having been clearly seen by the Managers, they projected and sanctioned a most comprehensive and complete plan of improvement, which, when completed, will reflect equal credit on yourselves and your architect, Mr Moffatt, and add enormously to the comfort, the health, and the means of recovery of our patients. The general principle running through these improvements, is the providing of better and more cheerful day-rooms, by the alteration of the old verandas, the better lighting of the corridors, the division of the larger dormitories into two, and the addition of fireplaces to most of the sleeping-rooms; the providing new and special dining accommodation for all classes near the new kitchen, and the addition to and improvement of the workshops. When all these things are done, our Metropolitan Asylum will, I venture to say, stand comparison with any of the great charities of Edinburgh.

The structural arrangements and defects of the East House are now under your consideration; and, no doubt, this department will be as fully adapted to the modern requirements of the class of patients for which it is intended as the West House. If this were not done, the higher class of patients would really be worse off, comparatively to their rates of board, than those in the West House. I have not been able to admit a large number of patients who wished to come to the East House at high rates of board on account of want of room.

Another year's experience has only served to confirm the views I expressed last year as to the advantages of a great chartered Asylum like this for the treatment of those mentally afflicted in all classes of society. Such an institution, existing as an independent corporation, with a special Act of Parliament for its regulation, should be more free from the influences of pecuniary gain, of government control, and of an ever-changing and often capricious rate-paying public, than any other kind of Asylum. With the one great aim before it, of curing and relieving one of the sorest ills that afflict humanity; with no restrictions as to the means of doing this; trying to provide as good medical skill and attendance for the poorest as for the richest; able to adapt its accommodation and rates of charge to every class; and securing the utmost privacy for those who seek its advantages, whether poor or rich, surely such an institution should appeal to the sympathy of all philanthropic men, and the best men in our city should aid in its management. So great a charity is the whole institution, that it could not fail, if it were properly brought under the notice of the benevolent, to evoke some more help than we get for our special Charity Fund, the object of which is to help those who are too poor to pay for themselves. We should be able to admit any one for a time, at least, without any board at all, who has been stricken down by mental disease, who is too poor to pay, and too self-respecting to apply to the parish. And when any of our patients leave us recovered, whom a little help would set on their feet again to fight the battle of life, our Charity Fund should be large enough to enable us thus truly to complete his cure. Let not the public imagine, that because we are not always going round, hat in hand, that our needs are not as great as many more clamant and obtrusive charities. It says little for the judgment with which the gifts of the benevolent are bestowed, if those labouring under mental derangement are quite overlooked in their distribution. This class of sufferers was not forgotten in this way by the Divine Author and exemplar of the law of love.

We have the power of repaying the public in many ways for any help given. If we can train here a trustworthy and experienced staff of attendants, the services of whom can be got by any one who is in want of one; if we can extend our knowledge of mental disease by the medical experience and observation gained here; if we can lay open, under proper conditions, this knowledge for the medical students at our medical school, by making some of our wards a part of the hospital field in which they can study, as is done by the conjoint scheme of teaching adopted by Professor Laycock and myself; if we can perform experiments towards the solution of the question as to the very best mode of treating and accommodating the insane—surely the public will benefit directly and indirectly by those things.

In the treatment of the patients, I continue to give as great an amount of liberty as is consistent with the nature of each case. About one-third of our East House patients either live in the cottages or wings, where they go out and in freely, or have the liberty of parole in the grounds. In the West House we continue to use every endeavour to employ usefully the majority of the inmates. About 70 per cent. are so occupied in the summer. In the winter we have to keep in many of the old and feeble on account of their health.

I beg to thank very cordially those gentlemen who have been good enough to lecture to us. Our course was a most interesting and instructive one. I have also equally to thank those ladies and gentlemen who came out and sang at our concerts. Such entertainments are greatly enjoyed, and looked forward to by the patients, and do them much good. The West House dances,

games, and excursions, and the East House parties in the drawing-room twice a week, still go on, and, with the lectures and concerts, leave few evenings in the week on which some pleasant meeting is not going on suitable for some class of patients—to while away their time, and distract their attention from their own morbid thoughts to things without them.

In conclusion, I have great pleasure in referring to the assiduity and conscientious diligence of the staff. We have lost the services of Dr Haigh, who had made himself greatly beloved by the ladies and gentlemen in the East House, over which he had charge; and now, since the beginning of this year, Dr Newington has left us—a most energetic and efficient officer, who devoted his whole time and his great abilities to the service of the institution and the good of the patients. Drs Maclaren and Brown I find most efficient assistants. The Rev. Mr M'Culloch, Mr Leslie, Miss Shearer, and Mrs Macdougall, continue to devote their whole energies to their work; while chief attendants Gregory and Lindores, and Mr Crombie, supervise their departments thoroughly.

Permit me to thank you, gentlemen, for your confidence and support, without which no one in my position could do his work well.

T. S. CLOUSTON, M.D., Physician-Superintendent.
